Whitespace at a glance

Where the global insurance and reinsurance market builds its digital future

High-volume specialty placements still rely on documents, email, and manual processes, creating inefficiencies as scale increases. Whitespace enables brokers and underwriters to build, offer, negotiate, place and bind insurance and reinsurance contracts in a truly digital form across all classes of business and geographies.

By structuring contracts as data from the outset, Whitespace removes rekeying, prevents version confusion, and enables faster, more reliable decisions from submission through to bind, powering live analytics, automated validation, and secure integration across the placement lifecycle.

Key benefits to digitisation:

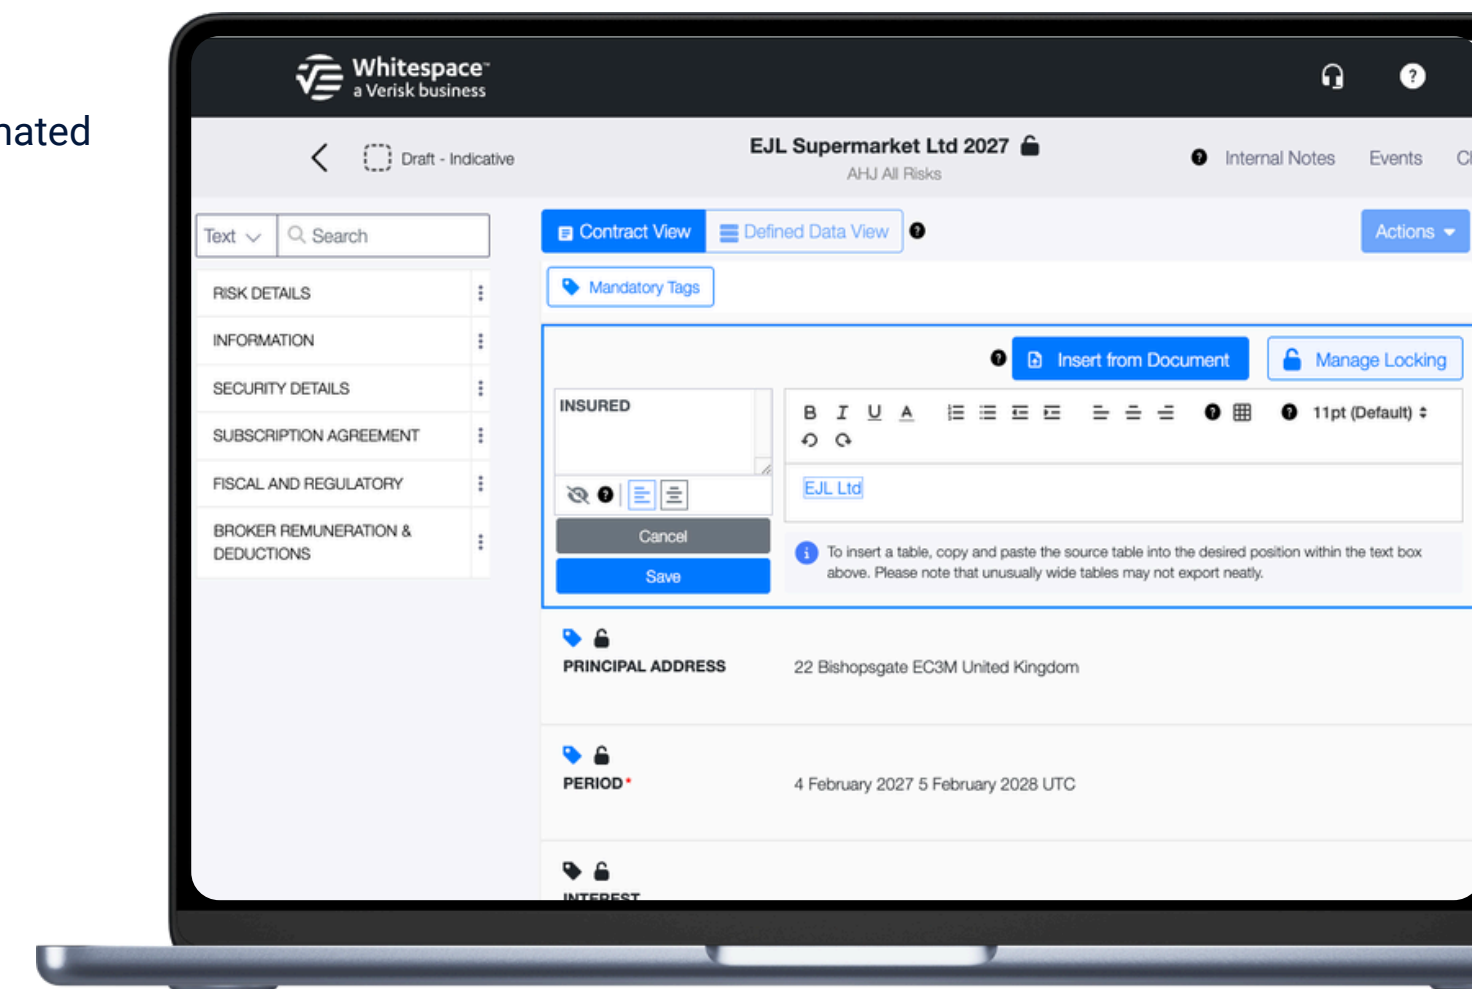

Faster, more reliable placement - Keep submissions, quotes and firm orders aligned through live data flow between systems.

Sustained efficiency at scale - Reduce manual effort and operational friction, enabling teams to scale without increasing headcount.

Modernisation without disruption - Introduce structured digital workflows alongside existing systems, without disrupting live placements.

Features

Enabling brokers and underwriters to move from submission to bind faster

Built for integration, designed for control

Whitespace is API-first by design, not a platform with APIs added later. This ensures contracts, data and workflows can move securely and reliably between systems, allowing organisations to integrate Whitespace into their existing technology landscape, rather than replacing it.

Progressive Automation

By digitising placements as structured data, automation can be introduced incrementally starting with repeatable, high-volume tasks, while keeping human judgement firmly in control.

Brokers and underwriters can work faster without changing how the market operates, while operations and technology teams keep governance, transparency and auditability. Every action is permissioned and traceable, supporting oversight and regulatory requirements.

The result is faster execution with fewer manual touchpoints, reduced operational friction, and a governed workflow you can trust.

How Whitespace drives scale, efficiency, and competitive advantage

- ✓ API-first by design - integrates with your existing systems and enables full workflow automation.
- ✓ Digital contract builder and placing platform in one product - the contract stays live and governed from first draft to final stamp.
- ✓ Contracts built as structured data from the outset - zero rekeying, zero reformatting, zero version confusion.
- ✓ Consolidated contract exchange - no chasing email chains, and a complete audit trail at every stage.
- ✓ Flexibility to build custom portals, branded experiences and bespoke workflows, fully integrated through powerful APIs.
- ✓ End-to-end lifecycle coverage - submission, negotiation, binding, endorsements and renewals.

Core capabilities

Build

- ✓ Structured contract creation from a versioned clause and line-item library
- ✓ Easy-to-clone templates for faster, more consistent risk creation
- ✓ Integrate structured data from your systems or customer portals into your contract with no rekeying

Place

- ✓ Full placement workflow: draft to signed
- ✓ Side-by-side contract comparison to highlight differences across submissions, quotes and bound terms
- ✓ Endorsements and contract corrections post-signature
- ✓ Support for open market, facilities, declarations and programmes
- ✓ Clause library sync - instantly know if a clause in a contract falls out of line with your approved library

Collaborate

- ✓ Broker internal and external Risk Chat, attached to every risk
- ✓ Network Chat with live online presence
- ✓ Subjectivities, internal review and sign-off workflows
- ✓ Broker partner sharing and co-broking support
- ✓ Full, printable audit trail and risk event history

Integrate

- ✓ Fully API-enabled, with every function accessible programmatically
- ✓ Single point of data upload (no rekeying) from internal systems
- ✓ Build custom user or client portals, branded experiences and bespoke workflows on top of the platform
- ✓ Export to PDF, Word or JSON and integrate with your Document Management System

Automation

Automate repeatable work, keep control where judgement matters

Automate high-volume workflows across pricing, underwriting and placement, reducing manual touchpoints, improving team speed, efficiency and throughput. Whitespace connects structured data, configurable rules and live integrations to support straight-through processing where it adds value, while retaining human decision-making where it matters most.

Rules

Risks built from structured data can automatically progress through Whitespace actions based on your defined triggers, using integration with your chosen rules engine.

Configuration

Configure automation rules for follow-on markets, templated workflows, and repeat placements to reduce cycle time and free teams from manual tasks.

Integration

Brokers can distribute risks directly into carrier systems; carriers can respond, bind and update records automatically.
